Retail Price List

RIVER'S EDGE FLOWER FARM  
Nuttall, Virginia

Gloucester Co.  
Daffodils 1946

Explanation of symbols: M means midseason, E early, EE extra early, and L means late. The varieties listed below are those in which we specialize. Our bulbs which we list by the bushel and peck are equal or superior in quality to those sold by the count by others at higher prices. We save the expense of sorting our bulbs and classifying them according to size, and this saving is passed on to our customers in the form of excellent value for their money. These bulbs are of good blooming sizes, some doublenose and some single or splits. A peck contains 50 to 150 bulbs, depending on the size and variety of the bulbs. (Larger type varieties have larger bulbs.) A singlenose or split should give one bloom, a doublenose will often give two.

YELLOW WITH LONG TRUMPETS	Per 10	Per peck	Per bu.
E - King Alfred - Solid, deep yellow -----	\$1.40	\$5.50	\$20.00
M - Emperor - Petals lighter than trumpet	.95	3.00	10.50

## Directions for Shipping and Planting

POSTAGE is NOT PREPAID on PECK and BUSHEL offers, but bulbs ordered by count will be sent postpaid to the fourth zone (600 miles) for orders of \$1.00 or more. A peck weighs about 12 lb. If you live within 150 miles of us, allow 22¢ postage on a peck. Bulbs may be sent express collect for one-half the first class express rate. (Usually less than postage, especially for heavier packages and greater distances.)

WHEN TO PLANT: September in the North, October in the South.

Where and how: Plant with base six or seven inches below surface of ground, in friable soil where moisture is available (but not where water stands). Where thermometer goes to zero and below, a mulch protection is advisable in winter. Where summer temperatures regularly run in the 80s and 90s, bulbs do better if protected by summer shade, which may be trees, shrubs, or tall grass. Bulbs should not be shaded heavily during the growing season, and their leaves should not be cut until they die.

BULBS FOR NATURALIZING: Nearly all varieties of daffodils are good for naturalizing, i. e. planting in grass or in a light woods, without cultivation or digging for a number of years. On the whole small varieties will bloom in this way somewhat longer without overcrowding from multiplication causing the bulbs to dwindle below blooming size. However larger varieties make more of a show for the first few years, and should bloom at least four years even without being dug and separated.

A MIXTURE will lengthen the time of blooming and give variety to the planting. (Our mixtures bloom over a period of three or four weeks with moderate weather conditions.) A planting of all one variety will give a more brilliant effect when in bloom however as the whole patch will be golden at one time. If you buy one peck each of several varieties, you can make a beautiful effect by planting in drifts of different varieties. Our mixtures are mixed by hand at shipping time and all bulbs are healthy and of good blooming sizes.
